Finora – Windows App for Managing Your Own Investment Portfolio

Limited beta Rust · Tauri · React

A desktop app for Windows that evaluates stocks and cryptocurrencies from your own transactions: portfolio value, profit and loss, history, cash and allocation. All data stays local, prices come from Binance, Deutsche Börse and Twelve Data, exchange rates from the ECB. Built with Rust, Tauri and React.

KEY POINTS

- Portfolio value, profit and loss and history from your own transactions
- Prices from Binance, Deutsche Börse and Twelve Data, ECB exchange rates
- Import from broker files, all data stays local
