SOLUNA – Solar and Lunar Calendar as a Progressive Web App

In development | React · TypeScript · PWA

An installable calendar app that shows the Gregorian calendar and the astronomically calculated lunar calendar side by side. It runs on iPhone, Android and in the browser, also offline, and needs neither an account nor a server.

KEY POINTS

- Gregorian and astronomically calculated lunar calendar side by side
- Installable on iPhone and Android, usable offline
- No account and no server
